

Testimonial: Hammock Greens’ Experience with PhytoVigor X Powered by PureCV™ Bio-stimulant.

At Hammock Greens, we’ve experienced a transformative impact on our crop cycle thanks to PureCV PhytoVigor X Bio-stimulant nutrient additive. The results from our initial trials have been remarkable, with immediate reductions in crop cycle times and improvements in plant quality. While we are still exploring the full potential of this product, the early outcomes are promising.

Product:PhytoVigor X Powered by PureCV™ Bio-stimulant –Aproprietary blend of naturally grown freshwater microalgae in liquid concentrate form.

Key Impacts:

- **Propagation:**
 - o Reduced propagation time by 2 to 3 days.
 - o Traditional propagation time: 18 to 21 days.
 - o New propagation time: 15 to 19 days.
- **Growth in NFT Pods:**
 - o Reduced time to full maturity by 4 to 5 days.
 - o Traditional growth period: 21 to 25 days.
 - o New growth period: 16 to 21 days.
- **Overall Benefits:**
 - o Improved plant size, shape, and quality.
 - o Reduced total growing time by up to one full week for leafy greens.

These results not only accelerate our crop cycles but also enhance the overall quality of the plants, creating a more efficient growing process in our NFT farms.

Looking ahead, we’re excited about the potential for energy savings. With the reduction in growth time, we anticipate decreased lighting needs, which could further reduce our energy consumption and cooling requirements. Although we’ve only completed two crop cycles with PhytoVigor X, the early results suggest that this product has the potential to enhance our operations in ways we hadn’t anticipated. We’re thrilled to continue exploring the full benefits of PureCV™ Bio-stimulant additives and the positive impact they will have on our business model.
